Job Description – Senior Data Scientist

Job Title: Senior Data Scientist
Location: India (Hybrid / Remote)
Experience Required: 4–7 Years

Job Overview

We are seeking an experienced **Senior Data Scientist** to join our analytics team. The ideal candidate will be responsible for building advanced machine learning models, performing deep data analysis, and delivering actionable insights that drive business decisions. This role involves working with large datasets and deploying scalable AI-driven solutions.

Key Responsibilities

- Design, develop, and deploy **machine learning models** for predictive analytics
- Analyze structured and unstructured data to extract meaningful insights
- Work closely with cross-functional teams to solve business problems using data
- Build and optimize **data pipelines** and analytical workflows
- Develop scalable solutions using **Python** and ML frameworks
- Create data visualizations and dashboards to communicate findings
- Ensure model performance, accuracy, and reliability

Required Skills

- Strong proficiency in **Python**
- Expertise in **Machine Learning algorithms**
- Solid experience in **Data Analysis** and statistical techniques
- Proficient in **SQL** for data extraction and querying
- Hands-on experience with **TensorFlow** or similar ML frameworks
- Knowledge of **Data Visualization tools** (Matplotlib, Seaborn, Power BI, etc.)

Preferred Qualifications

- Bachelor’s degree in **Computer Science, Data Science, or related field**
- Experience working with large-scale datasets
- Understanding of model deployment and optimization
- Experience in predictive modeling and AI-driven systems

Why Join Us

- Work on cutting-edge AI and data science projects
- Collaborative and innovation-driven work environment
- Opportunities for professional growth and leadership
